POST-OP INSTRUCTIONS FOR YOUR FINAL CROWN

You now have your final crown in place. Please treat this as a normal tooth in regards to brushing and flossing. Slight sensitivity could occur for a few weeks or longer. If this problem persists longer than 6 weeks or worsens please contact the office. Your gum tissue in this area may be tender for a few days due to you not being able to floss with the temporary in place. This should subside within a week. You can rinse with warm salt water twice a day to speed up the healing process. Any questions please feel free to call the office.
